

PLAN READING FOR ROADWAY MAINTENANCE

Basic Certification Course

Course Overview: This course ensures that the participant can perform basic math functions necessary for highway maintenance and has the ability to read and interpret construction plans used to build and maintain roads.

Participants will be required to demonstrate proficiency in the following areas:

- Basic maintenance math and calculations
- Calculation of areas and volumes
- Reading typical sections in a set of roadway plans
- Understanding of the views used in plans
- Ability to interpret stationing, symbols and abbreviations
- Details of the plan and profile sheets
- Using the cross-section sheets of roadway plans
- Locating information on the pipe sheets of roadway plans

Students will receive a Training Certificate!
