

SIGNAGE, PAVEMENT MARKINGS and MUTCD (Virtual or In-Person Class)

Course Overview: This virtual or in-person certification course ensures the participant has the technical knowledge to properly select signs and markings, sign requirements, proper placement, warrants, sign supports and pavement markings utilizing the *Manual on Uniform Traffic Control Devices*.

Upon completion of this course, participants will have learned the proper size, color and configuration of traffic signs, and know what traffic control devices to use in some of the most typical situations. They will also understand when and how trained flaggers should be used and learn the basics of how to develop, read and implement a Traffic Control Plan.

Course content includes:

- Basic requirements of traffic control devices
- Sign categories, usage, location and placement considerations
- Different pavement marking functions and specifications
- Design and application of delineators
- Traffic signals and their warrants
- Advantages and disadvantages of traffic signals
- Low-volume road traffic control devices
- Fundamental principles of temporary traffic control
- Typical zone components of temporary traffic control
- School traffic control factors
- Rail grade crossing traffic control and applications
- Traffic control design for bikeways and shared-use paths

Students will receive a Training Certificate!
