

TUSA-10 / DOT-10

Basic DOT General Workplace Safety Certification Course

Modeled after OSHA's 10-Hour general worksite safety program, Training USA's 10-Hour safety training course provides training for entry-level DOT workers and supervisors on the recognition, avoidance, abatement, and prevention of safety and health hazards in typical DOT workplace settings. Training USA offers this in-person interactive 2-day training course to provide the necessary training for general workplace safety more tailored to what DOT employees need.

- Minimum 10 employees per class, maximum 30 employees per class.
- Each student must attend the entire training and pass a final exam with 70% or better score.
- The first hour of the TUSA-10 course is the introduction to DOT-related safety.
- Mandatory subjects will include: *Electrical Safety, Hazard Materials & Communication, Personal Protective Equipment (PPE), and Fall Protection/Ladder Safety*, with remaining training time to be spent on areas of focus agreed upon by the client, such as *Emergency Action Plans, Temporary Traffic Control & MOT, Roadside Maintenance Safety, Lockout Tagout, Heavy Equipment Safety, Excavation & Trench Safety, Hand & Power Tool Safety, Trailer Transport & Load Securement Safety*, etc.
- Training subjects can include the client's safety program elements/procedures when applicable and requested.

Don't pay for your employees to look more attractive to other employers. Our program will give them training that is more specific and beneficial to the actual type of work they perform daily instead of providing them with an OSHA card to leverage into a better-paying job in private industry. Our training will make them safer and more valuable DOT employees and/or supervisors for your agency—NOT another employer!
